

REBOUND is a broad spectrum micronutrient product also with a biostimulant package identical to **4-EVER GREEN**. In certain situation there will be a need for supplemental manganese and magnesium as a foliar product. **REBOUND** is a product fortified with biostimulants that contains a very broad spectrum of critical micro nutrients that are most often deficient in the soils of golf greens and tees. The biostimulant balance in **REBOUND** is such that it can be used on both cool and warm season type turf regardless of stress conditions. **REBOUND** is a very good choice for "putting to sleep" warm season turf by applying it late in the fall just prior to the onset of dormancy. In fact it contains a proprietary carbon synergist that makes it ideal for this purpose. The carbon synergist is equally important in bringing warm season turf back from dormancy in the spring. **REBOUND** is an absolute essential component throughout the season as a tank mix component in all sprays on cool season turf types.
