

Redeem is a proprietary formulation of nitrogen and potassium designed for foliar application to all fine turf grasses. The nitrogen components provide for both immediate and long term availability. Also, because of the nitrogen mixture the nitrogen component does not crystallize on the leaf surface under harsh environmental conditions.

The potassium component of **REDEEM** is very rapidly absorbed by the turf, and in combination with the absorbed nitrogen provides a well balanced vascular solution.

The proprietary carbon synergist, enzyme, and plant fermentation extracts, in concert with the natural biostimulant compounds create the ability for maximum photosynthetic efficiency of the turf.

- EXCELLENT FOR USE THROUGHOUT THE SEASON.
- TANK MIX FRIENDLY WITH MULTIPLE PRODUCTS.
